**Available from the National Technical Information Service, U.S. Department of Commerce,  
5285 Port Royal Road, Springfield, Virginia 22161.**

## **ACKNOWLEDGEMENT**

**This report represents the efforts of the following EML staff: Anna Berne, Karin Decker, Michele Degennaro, Isabel M. Fisenne, Richard Godwin, John Kada, Ada Kong, Pamela M. Perry, William Rivera, Arnold Boyd, Nancy Chieco, Kevin Clancy, Francis DiPasqua, Brenda Jones, Sylvia Kendall and Camille Marinetti.**

## **ABSTRACT**

**This report presents the results from the analysis of the 48th set of environmental quality assessment samples (QAP XLVIII) that were received on or before June 1, 1998.**

## INTRODUCTION

This Quality Assessment Program (QAP) is designed to test the quality of the environmental measurements being reported to the Department of Energy by its contractors. Since 1976, real or synthetic environmental samples that have been prepared and thoroughly analyzed at the Environmental Measurements Laboratory (EML) have been distributed at first quarterly and then semi-annually to these contractors. Their results, which are returned to EML within 90 days, are compiled with EML's results and are reported back to the participating contractors 30 days later. A summary of the reported results is available to the participants 4 days after the reporting deadline via the Internet at [www.eml.doe.gov](http://www.eml.doe.gov).

This is the 54th report of this program. Preceding reports in this series are:

HASL-317	(February 1, 1977)	EML-439	(March 1, 1985)
HASL-319	(May 2, 1977)	EML-448	(October 1, 1985)
HASL-323	(August 1, 1977)	EML-453	(March 1, 1986)
HASL-331	(November 1, 1977)	EML-454	(March 1, 1986)
EML-336	(January 1, 1978)	EML-477	(October 1, 1986)
EML-337	(February 1, 1978)	EML-478	(March 1, 1987)
EML-340	(May 1, 1978)	EML-498	(September 1, 1987)
EML-343	(August 1, 1978)	EML-518	(January 2, 1989)
EML-346	(November 1, 1978)	EML-525*	(August 1, 1989)
EML-350	(February 1, 1979)	EML-526	(January 2, 1990)
EML-351	(February 1, 1979)	EML-530	(July 2, 1990)
EML-354	(May 1, 1979)	EML-535	(January 1, 1991)
EML-358	(August 1, 1979)	EML-539	(July 1, 1991)
EML-364	(November 1, 1979)	EML-543	(January 2, 1992)
EML-368	(February 1, 1980)	EML-546	(July 1, 1992)
EML-377	(August 1, 1980)	EML-551	(January 4, 1993)
EML-387	(February 1, 1981)	EML-556	(July 1, 1993)
EML-388	(February 1, 1981)	EML-559	(January 5, 1994)
EML-393	(August 3, 1981)	EML-561	(July 1, 1994)
EML-402	(February 1, 1982)	EML-565	(January 5, 1995)
EML-414	(April 1, 1983)	EML-569	(July 3, 1995)
EML-417	(September 1, 1983)	EML-576	(February 1, 1996, Revised)
EML-426	(March 1, 1984)	EML-581	(July 1, 1996)
PNL-5079	(April 1, 1984)	EML-587	(January 1997)
EML-431	(September 1, 1984)	EML-591	(July 1997)
EML-432	(November 1, 1984)	EML-594	(January 1998)
EML-438	(March 1, 1985)		

---

\*Please note this is a corrected report number.

## RESULTS

The results from the analysis of QAP-XLVIII samples received on or before June 1, 1998 are listed according to the TABLE OF CONTENTS. The data for the different kinds of samples are given in the following units:

Air Filters	Bq filter <sup>-1</sup>
Soil	Bq kg <sup>-1</sup>
Tissue	Bq kg <sup>-1</sup>
Vegetation	Bq kg <sup>-1</sup>
Water	Bq L <sup>-1</sup>

The values for elemental uranium are reported in  $\mu\text{g filter}^{-1}$ , g, or mL. Some programs require the use of pCi as reporting units, the conversion can be found on page 2.

The 'EML value' listed in the tables to which the contractors' results are compared is the mean of replicate determinations for each nuclide. The EML uncertainty is the standard error of the mean. All other uncertainties are as reported by the participants.

The control limit concept was established from percentiles of historic data distributions (1982-1992). The evaluation of this historic data and the development of the control limits are presented in DOE report EML-564. The control limits for QAP-XLVIII were developed from percentiles of data distributions for the years 1993-1998.

Participants' analytical performance is evaluated based on the historical analytical capabilities for individual analyte/matrix pairs. The criteria for acceptable performance, "A", has been chosen to be between the 15<sup>th</sup> and 85<sup>th</sup> percentile of the cumulative normalized distribution, which can be viewed as the middle 70% of all historic measurements. The acceptable with warning criteria, "W", is between the 5<sup>th</sup> and 15<sup>th</sup> percentile and between the 85<sup>th</sup> and 95<sup>th</sup> percentile. In other words, the middle 90% of all reported values are acceptable, while the outer 5<sup>th</sup>-15<sup>th</sup> (10%) and 85<sup>th</sup>-95<sup>th</sup> percentiles (10%) are in the warning area. The not acceptable criteria, "N", is established at less than the 5<sup>th</sup> percentile and greater than the 95<sup>th</sup> percentile, that is, the outer 10% of the historical data. These control limits for all 48 i/j pairs are listed in the Table of Control Limits (p. 3).

QAP is an external assessment of environmental radiological analyses. If your laboratory is performing other types of analyses (screening, high-level radiological), this evaluation system may not be appropriate, and you should continue to use an evaluation system appropriate to your data objectives.

Units for matrices: Air filter: AI=Bq/filter

Soil: SO=Bq/kg

Vegetation: VE=Bq/kg

Water: WA=Bq/L.

Values for elemental uranium in  $\mu\text{g}/\text{filter}$ , g or mL.

Conversion from Bq/kg or L to pCi/g or mL:

1 Bq/kg or L = 0.027 pCi/g or mL

Example: Convert 3 Bq/kg to pCi/g  
 $3 \text{ Bq/kg} \times 27 \text{ pCi/Bq/1000 g/kg} = 0.081 \text{ pCi/g}$

H3	0.69	0.81	1.20	1.80
PU239	0.80	0.90	1.15	1.36

Control limits are established from historical QAP data.

Where historical data are insufficient, limits of  $\pm 20\%$  and  $\pm 50\%$  are applied.

---

The following are recommended performance criteria for analysis of environmental levels of analytes:

Acceptable:  $\text{Lower Middle Limit} \leq A \leq \text{Upper Middle Limit}$

Acceptable with Warning:  $\text{Lower Limit} \leq W < \text{Lower Middle Limit}$  or  $\text{Upper Middle Limit} < W \leq \text{Upper Limit}$

Not Acceptable:  $N < \text{Lower Limit}$  or  $N > \text{Upper Limit}$

---

---

\*Control limits are reported as: the ratio of Reported Value vs. EML Value

---

## QAP 48 Summary of Matrix Evaluations by Laboratory

**Values for elemental uranium are reported in µg/filter, g, or mL.**

**pCi/g or mL=Bq x 0.027**

**Evaluation: A=Acceptable, W=Acceptable with Warning, N=Not Acceptable**

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply a site specific evaluation.

---

Values for elemental uranium are reported in  $\mu\text{g/filter}$ , g, or mL.       $\text{pCi/g or mL} = \text{Bq} \times 0.027$

Evaluation: A=Acceptable, W=Acceptable with Warning, N=Not Acceptable

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply a site specific evaluation.

Values for elemental uranium are reported in  $\mu\text{g/filter}$ ,  $\text{g}$  or  $\text{mL}$ .

$\text{pCi/g or mL} = \text{Bq} \times 0.027$

**Evaluation:** A=Acceptable, W=Acceptable with Warning, N=Not Acceptable

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply site specific evaluation.

Values for elemental uranium are reported in  $\mu\text{g/filter, g or mL}$ .

$\text{pCi/g or mL} = \text{Bq} \times 0.027$

**Evaluation:** A=Acceptable, W=Acceptable with Warning, N=Not Acceptable

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply site specific evaluation.

Values for elemental uranium are reported in  $\mu\text{g/filter, g or mL}$ .

$\text{pCi/g or mL} = \text{Bq} \times 0.027$

**Evaluation:** A=Acceptable, W=Acceptable with Warning, N=Not Acceptable

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply site specific evaluation.

Total Number Reported: 102

Values for elemental uranium are reported in  $\mu\text{g/filter, g or mL}$ .

$\text{pCi/g or mL} = \text{Bq} \times 0.027$

Evaluation: A=Acceptable, W=Acceptable with Warning, N=Not Acceptable

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply site specific evaluation.

Values for elemental uranium are reported in  $\mu\text{g/filter, g or mL}$ .

$\text{pCi/g or mL} = \text{Bq} \times 0.027$

**Evaluation:** A=Acceptable, W=Acceptable with Warning, N=Not Acceptable

If the evaluation system is not appropriate for the types of analyses performed in your lab, apply site specific evaluation.
